EYE CONTACT

Facial plastic and reconstructive surgeon **Dr. Rami Batniji**, lauded for his natural results (rhinoplasty leads the list) and remarkable patient care, discusses the evolution of eyelid procedures. **UPPER LIDS** I am writing a

paper for publication that describes my experience with a unique, minimally invasive endoscopic brow lift. I perform this surgery to not only reposition the brows, but also treat hooding of the upper eyelids. **LOWER LIDS** Lower eyelid surgery has evolved. Rather than removing the fat from the lower lid, I reposition that fat into the hollowness between the lower eyelid and cheek. I then lift the cheek. This results in a more youthful contour between the lower lid and cheek. 361 Hospital Rd., Suite #329, Newport Beach, 949-650-8882; drbatniji.com.
